

Muhammad Kashif

Full-Stack Developer | Aspiring AI Engineer

+923055641502 | mkashifkhanai@gmail.com | @kashifkhanai | Lahore, Pakistan

SUMMARY

Accomplished Full-Stack Developer with a strong foundation in building scalable web architectures using AdonisJS, TypeScript, and React. Currently transitioning into AI Engineering, leveraging expert-level Python and Generative AI knowledge to develop intelligent, data-driven systems. Focused on bridging complex software engineering with emerging AI technologies.

EXPERIENCE

Experts Cloud | Associate Full-Stack Developer

Aug 2025 – Present

Architecting enterprise-grade applications with a primary focus on AdonisJS and TypeScript for robust backend performance. Managing complex state and interactive UI using React.js and Redux Toolkit while ensuring full type-safety. Optimizing MySQL databases and streamlining development within WSL (Ubuntu) using GitHub Copilot.

Experts Cloud | Full-Stack Developer Intern

Feb 2025 – July 2025

Contributed to full-cycle web development using the MERN stack, assisting in the migration of legacy codebases to TypeScript for enhanced maintainability. Developed responsive components using Tailwind CSS and implemented secure JWT-based authentication flows.

Enigmatix | Python & AI Intern

Sep 2024 – Jan 2025

Engineered AI automation scripts and integrated Google Gemini API for real-time text processing. Performed deep data analytics and visualization using Pandas, Seaborn, and Matplotlib to derive actionable business insights.

SKILLS

- **Full-Stack Development:** React.js, AdonisJS, Redux / Redux Toolkit, JavaScript (ES6+), Node.js, Express, Tailwind CSS, RESTful APIs, TypeScript, WebSockets.
- **AI Engineering (In-Progress):** Python, Generative AI, LLMs, Prompt Engineering, FastAPI, Pandas, Seaborn, Matplotlib, Data Analytics, Data Visualization
- **Databases:** MySQL, MongoDB.
- **Tools & DevOps:** WSL (Ubuntu), GitHub Copilot, Docker, Nginx, AWS (Basic Deployment), Git & GitHub, SSH.

PROJECTS

Hospital Management System (PIMS)

Developed a comprehensive healthcare platform to streamline hospital operations and patient data management. Engineered a robust backend using AdonisJS and TypeScript for structured data handling, while building a dynamic, real-time user interface with React.js and Redux Toolkit. Focused on data integrity, high-concurrency handling, and secure medical record accessibility.

Share Vault & AI Chatbot Assistant

Built a secure file-sharing API featuring link expiry and JWT-based authentication using FastAPI and MongoDB. Developed a high-performance AI chatbot backend with WebSockets and Google Gemini API to generate low-latency, streaming responses for live interactions.

Flux Trade Engine (Live Crypto Dashboard)

Developed a real-time cryptocurrency trading dashboard utilizing the Binance WebSocket API. Engineered a high-performance React-based interface to track live market data streams with minimal latency.

Smart City Issue Detection & Reporting

Designed an AI-integrated GIS platform for urban issue tracking. Implemented real-time tracking features to improve civic response times and integrated the YOLOv8 Computer Vision model for automated issue categorization, enhancing scalability for smart city initiatives.

EDUCATION

BS Artificial Intelligence | The Islamia University of Bahawalpur

2022-2026

CGPA: 3.38

- **Relevant Courses:** Machine Learning, Deep Learning, NLP, Computer Vision, Programming for AI (Python), ANN
